About ACeS 2020

Cybersecurity has always been a challenge as attackers and hackers keep finding new ways to carry out cyber-attacks and cybercrimes. Although this is an established research domain, there is a need for researchers to explore and find solutions to combat new and emerging threats and vulnerabilities. The focus of this conference will be dual-fold:

1. Existing and established areas: Even with so many years or research and solutions contributed, there is still sharp rise in cyberthreats. This includes DDoS attacks, data theft, social engineering attacks, etc.
2. New and emerging areas: New domains such as Internet of Things (IoT), Industry 4.0, Blockchain, cloud & edge computing has brought upon new security challenges and opportunities. In addition, the advancement in Machine Learning and Artificial Intelligence incorporated with Big Data allows new techniques and approaches by improving real-time threat and vulnerability analytics.
